PREFACE

The data for *National Child Abuse and Neglect Data System (NCANDS) Child File, FFY 2013*, have been given to the National Data Archive on Child Abuse and Neglect for public distribution by the Children's Bureau. Funding for the project was provided by the Children's Bureau, Administration on Children, Youth and Families, Administration for Children and Families, U.S. Department of Health and Human Services.

ACKNOWLEDGEMENT OF SOURCE

Authors should acknowledge the National Data Archive on Child Abuse and Neglect and the original collector of the data when they publish manuscripts that use data provided by the Archive. Users of these data are urged to follow some adaptation of the statement below.

The analyses presented in this publication were based on data from the National Child Abuse and Neglect Data System (NCANDS) Child File, FFY 2013v1. These data were provided by the National Data Archive on Child Abuse and Neglect at Cornell University, and have been used with permission. The data were originally collected under the auspices of the Children's Bureau. Funding was provided by the Children's Bureau, Administration on Children, Youth and Families, Administration for Children and Families, U.S. Department of Health and Human Services. The collector of the original data, the funding agency, NDACAN, Cornell University, and the agents or employees of these institutions bear no responsibility for the analyses or interpretations presented here. The information and opinions expressed reflect solely the opinions of the authors.

The bibliographic citation for this data collection is:

U.S. Department of Health and Human Services, Administration for Children and Families, Administration on Children, Youth and Families, Children's Bureau (2014). National Child Abuse and Neglect Data System (NCANDS) Child File, FFY 2013 [Dataset]. Available from the National Data Archive on Child Abuse and Neglect Web site, <http://www.ndacan.cornell.edu>

PUBLICATION SUBMISSION REQUIREMENT

In accordance with the *NCANDS Child File Data License*, users of these data are required to deposit a copy of any published work or report based wholly or in part on these data with the Archive. A copy of any completed manuscript, thesis abstract, or reprint should be sent to the National Data Archive on Child Abuse and Neglect, Cornell University, Family Life Development Center, Beebe Hall, Ithaca, New York 14853. Such copies will be used to provide funding agencies with essential information

about the use of NDACAN resources and to facilitate the exchange of information about research activities among data users and contributors.

Please note: An additional requirement of the *NCANDS Child File Data License* is that users must submit notification copies of publications and presentations to the Archive. Publications must be sent concurrent with submission of the manuscript. Presentations must be sent within one month after the presentation. Please refer to the *NCANDS Child File Data License* for more information.

ABSTRACT

The National Child Abuse and Neglect Data System (NCANDS) Child File dataset consists of child-specific data of all investigated reports of maltreatment to State child protective service agencies. The NCANDS is a federally-sponsored annual national data collection effort created for the purpose of tracking the volume and nature of child maltreatment reporting. The Child File is the case-level component of the NCANDS. There is also an NCANDS State-level component, known as the Agency File, but those data are not part of this collection. States participate on a voluntary basis and submit their data after going through a process in which the state's administrative system is mapped to the NCANDS data structure. Submitted data consist of all investigations or assessments of alleged child maltreatment that received a disposition in the reporting year. Records are provided at the level of each child on a report, also known as the report-child pair. Data elements include the demographics of children and their perpetrators, types of maltreatment, investigation or assessment dispositions, risk factors, and services provided as a result of the investigation or assessment.

STUDY OVERVIEW

STUDY IDENTIFICATION

National Child Abuse and Neglect Data System (NCANDS) Child File, FFY 2013v1

Principal Investigator(s):

Children's Bureau
Administration on Children, Youth and Families

Funding Agency:

Children's Bureau, Administration on Children, Youth and Families, Administration for Children and Families, U.S. Department of Health and Human Services

PURPOSE OF THE STUDY

The NCANDS is a child abuse and neglect reporting program based on state participation. The NCANDS was designed in response to the Child Abuse Prevention, Adoption and Family Services Act of 1988 which created Section 6 of the Child Abuse Prevention and Treatment Act (CAPTA), and required the National Center on Child Abuse and Neglect (NCCAN) to establish a national data collection and analysis program on child maltreatment. The Act stated in part that:

"The Secretary shall, through the Center--(1) as a part of research activities, establish a national data collection and analysis program which, to the extent practical, coordinates existing State child abuse and neglect reports and which shall include---(A) standardized data on false, unfounded, or unsubstantiated reports; and (B) information on the number of deaths due to child abuse and neglect."

CAPTA as amended in May 1992 retained these provisions and added requirements in Section 105, part 1(b) that NCCAN establish a program:

" ... which shall collect, compile, analyze and make available State child abuse and neglect reporting information which, to the extent practical, is universal and case specific, and integrated with other case-based foster care and adoption data collected by the Secretary."

As a result, NCANDS has become the primary source of national information on abused and neglected children reported to State child protective service agencies. Findings from the NCANDS data are published by the Children's Bureau each year in its Child Maltreatment report series.

STUDY DESIGN

The NCANDS data submission protocol uses three formats. The Child File, which is released in this data collection, is the most comprehensive. It includes case-level data on all children who have received a disposition of an investigation or assessment of allegations of maltreatment during the reporting year (Federal Fiscal Year 2013 for Dataset #188). The Agency File collects aggregated, state-level, data on items that have been requested by the CAPTA legislation that are not able to be collected at the case

level. States that submit the Child File also submit the Agency File. The Summary Data Component is used by states that are unable to submit case-level data. The Summary Data Component consists of aggregated, state-level, statistics of key items in the Child File and the Agency File. Data from the Agency File and the Summary Data Component are also distributed by NDACAN. The CAF consists of aggregated data by state and by year.

DATE(S) OF DATA COLLECTION

Federal fiscal year: Oct 1, 2012 through Sep 30, 2013

GEOGRAPHIC AREA

Forty-six states (including the District of Columbia, and Puerto Rico) submitted data to the NCANDS Child File for FFY 2012. The following six states did not submit Child File data: Idaho, Maryland, North Carolina, Ohio, Oklahoma, and Virginia

UNIT OF OBSERVATION

The unit of observation in the Child File is the report-child combination (R/C pair). A child identifier may appear on more than one record because the child could be included on more than one report. A report identifier may repeat, because there will be a separate record for each child on the report. However, no two records will have the same ReportID/ChldID pair.

SAMPLE

The NCANDS Child File represents a census of all child protective services investigations or assessments conducted in the states that participated in the NCANDS. Investigations or assessments that reached a disposition between October 1, 2012 through September 30, 2013 are included. For FFY 2013v1, the resulting dataset consists of 3,427,678 records, or report-child pairs, from 44 states plus the District of Columbia and Puerto Rico.

DATA COLLECTION PROCEDURES

State participation in the detailed case data collection consists of mapping each requested data element into the Child File record layout, extracting the State data into the Child File record layout, and submitting the case level data to NCANDS.

In the first process, the State Mapping Process, the state receives the "Guidelines and Procedures for Submitting Data to NCANDS" document. States may collect data using different concept and category definitions, variables collected, variable names, and valid values. Thus, it is necessary for each state to map (convert) data, including codes, from the state's computer system into the standard record layout of NCANDS. Using the Guidelines, the state performs this State Mapping Process for the Child File. This activity, done during the Data Mapping Meetings, help to unify the coding structures of states and to enhance data consistency across states that are submitting NCANDS data. The Technical Assistance and Map Review process is provided by the NCANDS Technical Team to assist the state in its mapping activities. The goal of technical assistance is a state annual data submission that passes all NCANDS validation checks.

Upon completion of the State Mapping Process, the state moves into the next three integrated processes: State Data Submission, NCANDS Validation of Data Submission, and the Technical Assistance Review of Data. In the State Mapping Process, the state uses the completed mapping forms as specifications and writes its data extraction computer program to transfer the data from the state's database into the Child File. The file is created by the state for the given year and is submitted to NCANDS. During the State Data Submission process, the NCANDS Technical Team continues to provide assistance to states regarding decisions about the use of unique identifiers, record construction, and quality of data, as needed.

When the data set is received by the Children's Bureau, the NCANDS Validation of Data Submission and the Technical Assistance Review of Data processes begin. The NCANDS Technical Team validates and reviews the data, and provides the state with feedback about the data quality. This cycle of data submission, review, and assistance may go through several iterations before the final data set is ready.

Once the data submission and review activities are complete, the State Submission of Year's Final Data Set process occurs. The NCANDS Technical Team reviews and validates the final submission and then proceeds with the analysis activities for all of the States.

Once all these processes are completed the state files are sent as a package to the National Data Archive on Child Abuse and Neglect for public distribution.

SOURCES OF INFORMATION

States extract case-level data from their child welfare information systems for submission to NCANDS. All reports reaching a disposition date, (i.e. the report is completed) in a given year are mapped to the NCANDS data elements and included in the submission. Note that the determining date for entry of the case into a data year is when the report is closed, not the data of the incident or the date the incident was reported.

TYPE OF DATA COLLECTED

Extractions from state administrative records

RELATED PUBLICATIONS & REPORTS

Users are strongly encouraged to obtain these references before doing analyses.

U.S. Department of Health and Human Services, Administration on Children, Youth and Families. (2014). Child Maltreatment 2013. Washington, DC: U.S. Government Printing Office.

Please note that states may have updated their data since the publication of Child Maltreatment. As a result, summaries of the Child File data in this collection may not agree with the tabular data presented in the published report.

ANALYTIC CONSIDERATIONS

When conducting analyses with NCANDS data, it is important to keep in mind that state-to-state

variation in child maltreatment laws and information systems may affect the interpretation of the data. Users are encouraged to refer to the state mapping documents included on the data CD for information about how the state's system codes its data.

REPORT AND CHILD IDENTIFICATION CODES

Records in the Child File are often referred to as report-child pairs, because each individual record in a state's Child File can be identified through reference to two identification variables, the report ID (RptID) and the child ID (ChID). When there are multiple children in a report, each child in the report is assigned the same unique Report ID. Similarly, if a child appears in multiple reports, each report for that child contains the same unique Child ID. When working beyond the state level, include the state identifier when counting individual records.

There are, however, a few caveats to consider when using the child ID to match different reports within the Child file. A state's laws and data processing capabilities may sometimes limit the ability to match children to previous reports. This limitation is most commonly observed in unsubstantiated reports where a state's laws may prohibit the archiving of data that identifies these children or families. As a result, the use of the child ID to identify children in multiple reports should be limited to reports where the maltreatment was substantiated or indicated. The inability to identify the same child in multiple reports might also occur in states with county-based data collection systems if records cannot be referenced across counties.

AGGREGATING THE DATA BY REPORT OR CHILD

Although the data may include multiple entries for a given report or child, these data can be aggregated into a file that contains only one entry per report or one entry per child. For example, a file of unique reports that describe characteristics of the children in the reports can be created. Such characteristics might include the total number of children referenced in a report or the age of the youngest and oldest children. Conversely, a file of unique children can be created that contains a count of the number of reports in which a child was included or the type(s) of maltreatment associated with the respective reports. Please refer to the sample syntax in the accompanying documentaton for examples of how to aggregate the data.

STATE CLASSIFICATION OF THE DISPOSITION OF INVESTIGATIONS

The disposition of each investigation depends on the classification system used by the participating state. Most states use a two-tier system that categorizes an allegation as substantiated or unsubstantiated. Some states use a three-tier system that includes a third category, indicated. In these states, maltreatment is indicated if there is sufficient reason to suspect that the child may have been maltreated or is at risk of maltreatment, but the level of evidence required by state law to substantiate an allegation does not exist.

A small number of states have diversified systems that do not fit into the two and three tier disposition categories. To accommodate these states, NCANDS uses two additional disposition codes, known as Alternative Response-Victim and Alternative Response-Nonvictim. Only states with a diversified system use these codes.

For analytic purposes, NCANDS considers children who have been assigned the Substantiated, Indicated, or Alternative Response-Victim codes to be victims of maltreatment.

MALTREATMENT DISPOSITION VERSUS REPORT DISPOSITION

On a Child File record, dispositions of substantiated, indicated, unsubstantiated, etc. can be assigned for up to four different allegations of maltreatment. For example, if physical abuse and neglect are alleged, either one, both, or neither one may be substantiated.

An overall disposition for the report is also assigned and applies to all children on the report, regardless of the disposition of the individual child's allegations. The disposition of a report will correspond to the highest level of any of the allegations for any of the children on the report. For example, if a report has three children, and only one allegation for one child was substantiated, then the report disposition is substantiated for all three children. Only if all the allegations for all the children on the report are unsubstantiated is the report disposition coded as unsubstantiated.

MALTREATMENT CODING

As mentioned above, up to four sets of maltreatment allegations and disposition levels can be assigned for each child on a report. There is no prescribed order in which the maltreatment elements appear on the data record and any maltreatment type can fall in any of the four sets. However, no maltreatment type can be repeated within a given record.

USING MULTIPLE YEARS OF THE CHILD FILE

When analyzing more than one year at a time, be aware that although a ReportID/ChildID combination will not repeat within a data year, it can repeat across years. These are cases where there is a second or subsequent disposition, due to an appeal or some other reason. Since inclusion in a particular year's NCANDS file is based on the disposition date, the later date can sometimes cause the case to be included in a subsequent Child File year. When removing such duplicates, choose the case with the most recent disposition date (RpDispDt).

OTHER DATA QUALITY ISSUES

Child IDs with an Unlikely Number of Reports

You will encounter Child IDs that seem to have an inordinate number of appearances in the data. Puerto Rico is particularly problematic in this regard, not having developed a method for assuring that an ID has not already been used. For other instances, the problem is usually confined to those states that use dummy Child IDs for cases where the identity of the child cannot be determined (Iowa, Montana, Utah). Occasionally, there is a legitimately high number of reports for the same child.

Multiple Reports on the Same Day

There are cases with multiple reports on the same day for the same child, often with the same report source, report disposition, maltreatment type, etc. These seem to be substantially duplicate records. Such duplicates have not been deleted from the file.

CONFIDENTIALITY PROTECTION

“CoAll ID variables submitted to the NCANDS have been encrypted by the states to prevent tracing a Child File record back to the record in the state’s child welfare information system.

To further protect the confidentiality of the individuals in the Child File, the following targeted modifications were made to the data:

1. Six variables -- the child’s date of birth, the child’s county of residence, Worker ID, Supervisor ID, Incident Date, and Death Date -- are dropped from the distributable Child File and are not available to the research community.

NOTE: Prior to the FY2010 Child File, AFCARS ID was not included in the publicly-available dataset. Beginning with the FY2010 Child File, and for updated versions of older datasets, the AFCARS ID is included in the publically-available data file.

2. For records involving a fatality (i.e. MALDEATH = 1), the records are kept in the distributable file, but the values for state (STATERR), county of report (RPTCNTY), and the ID variables for the report (RPTID), the child (CHID, AFCARSID), and the perpetrators (PER1ID, PER2ID, PER3ID) are recoded to mask the information.

3. If there are fewer than 1,000 records for a given county of report, the value for that variable (RPTCNTY) is recoded to mask the information.

4. The report date (RPTDT) variable has been recoded so that days 1-15 round to the 8th of the month and days 16-31 round to the 23rd. As a result, the dates in RPTDT all fall on either Day 8 or Day 23 of the month.

5. All other dates (InvDate, RpDispDt, ServDate, RmvDate, FCDchDt, and PetDate) in the distributable Child File have been adjusted so that the interval between that date and the report date is preserved even after the report date has been rounded to either the 8th or the 23rd of the month, as described in item #4 above.

6. There are two time variables in the data: Time of Report (RptTm) and Investigation Contact Time (InvStrTm) are rounded to the nearest hour, reported on the half-hour. So, for example, 15:30 means between 3:00 PM and 3:59 PM.

6. The child’s age (CHAGE) is top-coded so that any value greater than or equal to 18 is assigned to an "18 or older" code. Similarly, perpetrator age (PER1AGE, PER2AGE, PER3AGE) is top-coded to "70 or older" and bottom-coded to "under 18."

7. If there are a very small number of records at the county level (RPTCNTY) with a particular race or Hispanic ethnicity, the race and ethnicity information for the individual is masked. For example, if there is only one Hawaiian or Pacific Islander child in Renkford County, SC, all the race and ethnicity variables for that child will be recoded to Unknown.

DESCRIPTION OF COLLECTION

The Collection consists of the NCANDS Child File data in several formats. SAS, SPSS, and Stata native files, and a column-specified text file for use by other programs. See the ReadMe text file in the downloaded zip folder for more details about the contents of the collection.

EXTENT OF PROCESSING

NDACAN produced the User's Guide and Codebook and completed the modifications to the data necessary for protecting child and perpetrator confidentiality. One variable, *RptVictim*, was created by NDACAN.

DATA FILE INFORMATION

DATA FILE NOTES

The perpetrator fields are populated for those records associated with a substantiated, indicated, or alternative response-victim report. For reports where no victimization was determined, the values for the perpetrator fields are missing.

For Pennsylvania, users should be aware of two important characteristics of the data. First, Pennsylvania is not allowed by state law to provide any race or Hispanic ethnicity data in its NCANDS data submission. Second, the Pennsylvania reporting system is child-based, meaning that each report has only one child. In other states, children who are subjects of the same investigation share the same report ID, but in Pennsylvania, this is not the case.

THE SAMPLE DATA FILE

The sample file is a systematic sample of approximately 10,000 records from the NCANDS FFY 2013 Child File. It is supplied in order to give researchers a smaller, more manageable dataset that will run faster in their statistics software, and can be used to explore the data, test hypotheses and develop coding syntax that can be run, after testing, on the full dataset.

Results of analyses conducted on the sample file should generalize to the entire dataset, but we strongly recommend that researchers present findings from the full Child File and not the sample file.

VARIABLE INFORMATION

Four sections follow this page. The first two sections list the variables in the file, first in the order in which they appear in the data file, and then by an alphabetic listing. The third section is the Codebook, which contains a detailed description of the variables arranged in the order in which they appear in the file. The final section lists all the identified counties by name and by FIPS code. All identified counties have at least 1000 records in the dataset. The identity of counties with fewer than 1000 records have been recoded to the value -1.

In the descriptive section the file's variable names, variable labels, and variable formats are provided on the first line. Variable definitions and notes are also provided. When appropriate, variable values and their corresponding labels are listed.

CHILD FILE VARIABLES BY POSITION

Order	Variable Name	Variable Label	Group
3	SubYr	Submission Year	Report Data
4	StaTerr	State Territory	Report Data
5	RptID	Report ID	Report Data

CODEBOOK FOR THE NCANDS CHILD FILE

<i>Element Name</i>	<i>Variable Label</i>	<i>Group</i>	<i>Type</i>	<i>Columns</i>
3	SubYr Submission Year	Report Data	F4	1-4
<p>The submission year is defined as including all reports whose dispositions occurred within the specified year. Reports received, but whose dispositions did not occur during the specified year, should not be included in the NCANDS data submission. Reports received in a prior year, but whose disposition was made within the reporting year, should be included in the NCANDS data submission.</p> <p><i>* Only reports with completed investigations in the current submission year are subject to inclusion. Pending investigations should not be included.</i></p>				
4	StaTerr State Territory	Report Data	A2	5-6
<p>The State/Territory submitting child abuse and neglect data for the NCANDS</p> <p><i>If MalDeath = 1 (Child Died), then this variable is recoded to "XX" (Not Provided for Confidentiality Reasons)</i></p>				
5	RptID Report ID	Report Data	A12	7-18
<p>A unique identification assigned to each report of child maltreatment. This identification is not the actual State report identification but is an encrypted identification assigned by the State for the purposes of the NCANDS data collection.</p> <p><i>If MalDeath = 1 (Child Died), then this variable is suppressed (recoded to "XXXXXXXX")</i></p>				
6	ChID Child ID	Report Data	A12	19-30
<p>A unique identification assigned to each child. This identification is not the State child identification but is an encrypted identification assigned by the State for the purposes of the NCANDS data collection.</p> <p><i>If MalDeath = 1 (Child Died), then this variable is suppressed (recoded to "XXXXXXXX")</i></p>				
7	RptCnty County Of Report	Report Data	F3	31-35
<p>The jurisdiction to which the report of alleged child maltreatment was assigned for a CPS response. The unique identification number assigned to the State and county under the Federal Information Processing Standards (FIPS) guidelines is preferred.</p> <p><i>In the contributed data, this variable has values 001-999. Because states use the same county numbers, we add the (1 or 2-digit) State FIPS code at the front. The resulting code is a four or five-digit number. The last three digits are the county code. For counties that have fewer than 1000 cases, -1 is substituted for the County Code. The names and FIPS codes of all counties with 1000 or more records is included at the end of the Codebook. If MalDeath = 1 (Child Died), this variable is recoded to -1 (Not Provided for Reasons of Confidentiality)</i></p> <p>Value Value Label</p> <p>-1 County Has Fewer Than 1000 Records</p>				

Element Name	Variable Label	Group	Type	Columns						
998	Out of State									
999	Unknown or Missing									
8	RptFIPS	Derived: State/County FIPS Code	Report Data	A5 36-40						
<p>The state and county FIPS code of the jurisdiction to which the report of alleged child maltreatment was assigned for a CPS response. It may or may not be the child's county of residence.</p> <p><i>Derived from RptCnty. The first two characters are the state code; the last three are the county code.</i> <i>XX999 = State code with missing county</i> <i>XX000 = State code and county <1000 records</i> <i>00000 = Child Died</i></p>										
9	RptDt	Report Date	Report Data	DATE11 41-51						
<p>The month, day, and year that the responsible agency was notified of the suspected child maltreatment.</p> <p><i>In the Contributed File, this var is continuous. On output, it is rounded to the 1st or the 15th in this manner: Days 1-15 rounds to 8th of month Days 16-31 round to 23rd</i></p> <table border="1"> <thead> <tr> <th>Value</th> <th>Value Label</th> </tr> </thead> <tbody> <tr> <td>8</td> <td>Days 1 through 15</td> </tr> <tr> <td>23</td> <td>Days 16 through 31</td> </tr> </tbody> </table>					Value	Value Label	8	Days 1 through 15	23	Days 16 through 31
Value	Value Label									
8	Days 1 through 15									
23	Days 16 through 31									
10	RptTm	Report Time	Report Data	TIME5 52-56						
<p>The hour and minute when the responsible agency was notified of the suspected child maltreatment.</p> <p><i>Times are in 24-hour format and are rounded to the nearest hour, reported on the half-hour. So, for example, 15:30 means between 3:00 PM and 3:59 PM.</i></p>										
11	InvDate	CPS Response Start Date	Report Data	DATE11 57-67						
<p>The date when CPS first had face-to-face contact with the alleged victim of child maltreatment.</p> <p><i>Not all states provide this date. If the state's definition includes contacting the alleged victim or other collaterals then the state should fill this field. If the state's definition of investigation start date is at the point of transfer to an investigation worker or unit, then the state should not fill this field. If the state's definition is any attempted contact, then the field should not be filled.</i></p> <p><i>This date has been adjusted so that the interval between it and the report date is preserved after the report date has been rounded to either the 8th or the 23rd of the month.</i></p>										

Element Name	Variable Label	Group	Type	Columns
12	InvStrTm Investigation Contact Time	Report Data	TIME5	68-72
	The hour and minute when CPS first had face-to-face contact with the alleged victim of child maltreatment.			
	<i>Times are in 24-hour format and are rounded to the nearest hour, reported on the half-hour. So, for example, 15:30 means between 3:00 PM and 3:59 PM.</i>			
13	RptSrc Report Source	Report Data	F2	73-74
	The category or role of the person who makes a report of alleged maltreatment.			
	Value	Value Label		
	1	social services personnel

	13	anonymous reporter		
	88	other		
	99	unknown or missing		
14	RptDisp Report Disposition	Report Data	F2	75-76
	The conclusion reached by the responsible agency regarding the report of maltreatment pertaining to the child in the record.			
	<i>This is the final finding or disposition of the Report. If at least one maltreatment for any child in the report is "substantiated", all records (children) with this same Report ID should have this Report Disposition set to "substantiated". If all maltreatments for all children in the report are "unsubstantiated", all records (children) with this same Report ID should have the Report Disposition set to "unsubstantiated". Thus, this variable cannot be used to determine the substantiation of a particular child. It pertains only to the Report.</i>			
	Value	Value Label		
	1	substantiated		
	2	indicated or reason to suspect		
	3	alternative response disposition-victim		
	4	alternative response disposition-not a victim

60	FCPublic Public Assistance	Caretaker Risk Factors	F1	136
	Any one or combination of the following welfare or social services programs: AFDC, General Assistance, Medicaid, SSI, Food Stamps, etc.			
	Value	Value Label		
	1	yes		
	2	no		
	9	unknown or missing		
61	PostServ Post Investigation Services	Services Provided	F1	137
	The child protective services agency, social services agency, and/or the child welfare agency provides or arranges post investigation services for the child/family as a result of needs discovered during the course of the investigation. If services were being provided prior to or as a result of the report of alleged child maltreatment, the continuation of the service provisions after the disposition of the investigation would constitute post investigation services. Post investigation services are delivered within the first 90 days after the disposition of the report and would include: Family Preservation, Family Support, Foster Care and other services listed in the NCANDS record layout.			
	Value	Value Label		
	1	yes		
	2	no		
	9	unknown or missing		
62	ServDate Service Date	Services Provided	DATE11	138-148
	The service date for post investigation services provided as a result of needs discovered during the course of the investigation should be the date of the report disposition or a date decided by the State to be more appropriate than the report disposition date. The service date for cases for which services were continued (or changed) as a result of the investigation disposition should be the date of the most recent case opening prior to the receipt of the report of alleged child maltreatment.			
	<i>This date has been adjusted so that the interval between it and the report date is preserved after the report date has been rounded to either the 8th or the 23rd of the month.</i>			
63	FamSup Family Support Services	Services Provided	F1	149
	Family support services are primarily community-based preventative activities designed to alleviate stress and promote parental competencies and behaviors that will increase the ability of families to successfully nurture their children; enable families to use other resources and opportunities available in the community; and create supportive networks to enhance child-rearing abilities of parents and help compensate for the increased social isolation and vulnerability of families.
