INTRODUCTION

The Code Book for the AFCARS Adoption File is a product of National Data Archive on Child Abuse and Neglect (NDACAN). NDACAN is funded by the Children's Bureau, Administration on Children, Youth and Families, Administration for Children and Families, Department of Health and Human Services. NDACAN supports secondary analysis of its datasets by providing technical support.

To assist individuals using the NDACAN AFCARS Adoption File, this code book includes information on the NDACAN version of the AFCARS Adoption File (Ad). The NDACAN adoption data file differs from the version of the data that States send to the Children's Bureau. See the User's Guide for details on differences.

Terminology

This section defines terms used in the Table of Contents and throughout the code book.

Variable Number: The number assigned for each item of information in the NDACAN file, in the order they appear in the data file. There are 61 variables in the code book.

AFCARS Element: These are the elements States are required to submit according to 45 CFR1355.40. There are 49 required adoption elements.

Derived variable: These are items added by NDACAN that combine and/or uses AFCARS elements. They are intended to make the data easier to work with, to reduce the workload on the user, and to assure consistent definition of terms across users of the data.

NDACAN AFCARS Adoption Variables

There are two tables that list the contents of the file, headed “NDACAN AFCARS Adoption Variables.” One is arranged by the order of the variables in the data; the other alphabetically by variable name. Both lists have the same columns.

Column “Var#” is the order of the variable in the data.

Column “Regulation” has the location of the variable in the federal regulation at [45 CFR 1355](#). The specific elements required by AFCARS are defined in [Appendix A](#) of CFR 1355.

Codebook Entries

Each codebook entry has the following information:

- **Page Title:** The variable label
- **Name:** The variable name
- **Definition:** The definition of the variable (from 45 CFR 1355, or by NDACAN if derived)
- **Data Type:** Text, numeric, or date
- **Element #:** The element number in the AFCARS system

Element #: 02m

Record Number

Name: RECNUM

Definition:

The 12-character code (AFCARS ID) that the title IV-E agency uses to transmit data to the Department of Health and Human Services (DHHS).

Some states assign a new identifier to adopted children. See the Excel spreadsheet "FC-Ad Linkable Records by State.xlsx" in the Documentation folder provided from NDACAN.

Data Type: String

Element #: 03

State Agency Involvement

Name: AGNYINVL

Definition:

Indicates whether the state Title IV-B/IV-E agency had any involvement in the adoption, that is, whether the adopted child belongs to one of the following categories:

- 1) A child who had been in foster care under the responsibility and care of the state child welfare agency and who was subsequently adopted whether special needs or not and whether a subsidy was provided or not;
- 2) A special needs child who was adopted in the state, whether or not he/she was in the public foster care system prior to his/her adoption and for whom non-recurring expenses were reimbursed; or
- 3) A child for whom an adoption assistance payment or service is being provided based on arrangement made by or through the state agency.

State Foster Care ID

Name: StFCID

Definition:

The purpose of this variable is to aid in linking files by providing one consistently-named variable across NDACAN administrative datasets. The StFCID is the combination of the variables "St" (the state 2-character code) and "RecNumbr", the encrypted child's AFCARS identifier. This same variable can be found in the NYTD Outcomes File, the AFCARS Foster Care File, and the NCANDS Child File.

This variable is also the easiest way to distinguish individual children, since a RecNumbr can possibly duplicated in some other state, one would have to include St along with RecNumbr in any process that involves distinct children (e.g., counting, selecting, grouping, etc).

Data Type: String(14)
